## **Student Grades Application Overview**

Nakul Patel | 169021079 | CP212 | Dr. Heider Ali

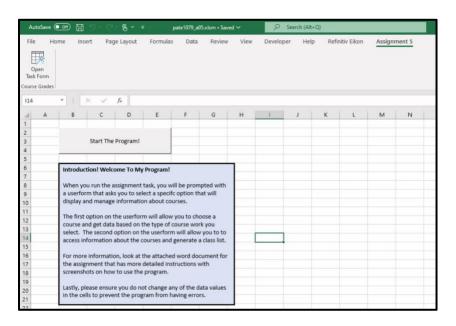

Greetings user! Welcome to an overview of my student grade application. I appreciate your time and interest in exploring my application for this course. In the rest of this document, I will delve into the functionalities of the application and provide guidance on its proper usage. Have fun!

## Features:

- 1. Retrieves data from databases, specifically .mdb files in this instance, utilizing SQL queries to gather and employ the necessary information.
- 2. Establishes individualized profiles for students in each course, ensuring easy accessibility and readability of their data.
- 3. Provides statistical insights into data and grades, presenting information such as averages, minimums, maximums, modes, and standard deviations.
- 4. Produces visual representations of data through charts and tables in Excel for each course.
- 5. Generates a MS Word report containing all the collected data pertaining to the course.

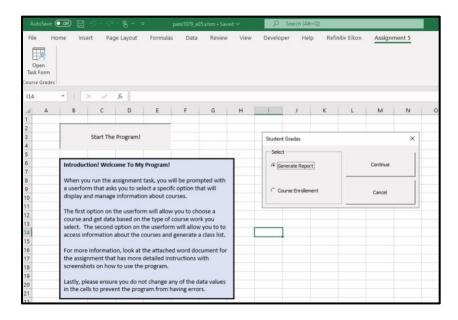

## Instructions:

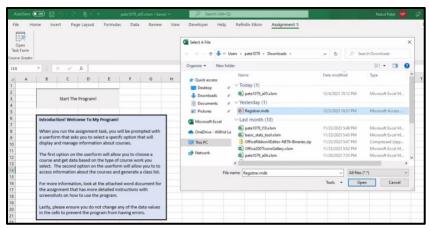

1. The first step is to open the Excel file. The application can be executed in two ways. You can either click the button on the "Main Page" worksheet or navigate to the "Assignment 5" tab at the top and select the "Open Task Form" button. Both methods are effective!

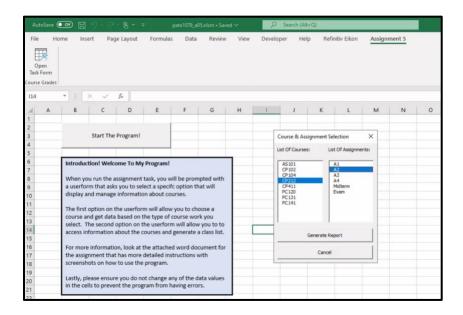

2. After starting the application, a user form will appear, providing you with the option to choose between two options: "Generate Report" and "Course Enrollment." After making your selection and clicking "Continue," another window will prompt you to choose a .mdb formatted file. For

optimal use of this application, please select the "registrar.mdb" file located within the project's zip file. You can choose any of the two options or press cancel to leave the application.

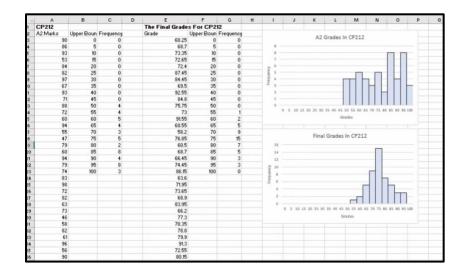

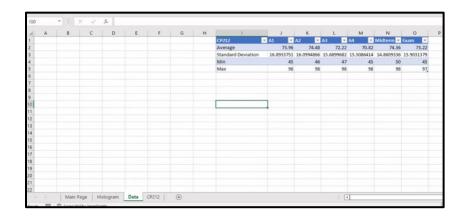

3. If you opt for the "Generate Report" feature and have chosen the "registrar.mdb" file, a new user form will be presented. On this form, you will find a list box containing courses and another list box displaying a list of assignments. You can make your selections for the course and assignment you wish to generate a report for. After, please click on "Generate Report."

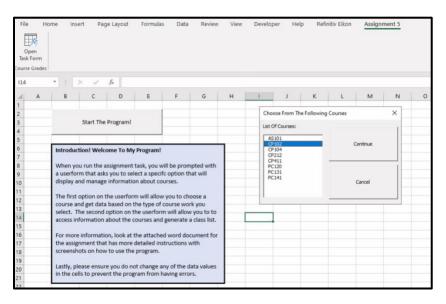

4. After clicking "Generate Report," several processes will take place on your screen and, more importantly, within the application. Please be patient, as a large amount of data is being processed. Once everything completes processing, you will notice a new worksheet named "Histogram." This sheet will contain the assignment grades and final grades for the course you selected. Additionally, in the "Data" worksheet, you will find a detailed table created with grade information about the course. Lastly, a word file will also be created with the same information.

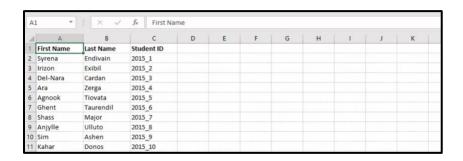

5. If you opt for the "Course Enrollment" feature and have chosen the "registrar.mdb" file, a new user form will be presented. On this form, you will find a list box containing courses. You can make your selection for a course you wish to see a class list for. After, please click on "Continue."

6. Upon clicking "Continue," a new worksheet should be generated and named after the course you selected. This worksheet will present the first and last names, along with the student IDs, of all the students enrolled in the chosen course.

You've Made It To The End! Congratulations!
